WHY PLASMA WELDING?

Plasma arc welding is measurably the lower cost process with savings gained through increased productivity, reduced scrap, reduced downtime and fewer electrode changes.

Thickness limitation

Maximum thickness which can be welded, flat with butt-jointed surfaces, in one pass with 100 % penetration. Maximum thickness that can be welded is reduced for:

- vertical up and horizontal welding positions,
- small diameter and very thick tubes.

Depending on the thickness of the material, using keyhole plasma welding, deconfined plasma welding, TIG or microplasma welding.

Thickness	Electrode (SMAW)	Manual TIG (GTAW)	Plasma (PAW)
3 mm (0.12")			
8 mm (5/16")			
> 8 mm (> 5/16")			

Welding in one pass without preparation:
carbon steel and stainless steel, austenitic up to 8 mm (5/16"), titanium up to 10 mm (0.4").

Example of productivity gain with carbon steel (5 mm / 0.2"):

- Electrode: preparation + 2 passes at 15 to 20 cm/min (6 to 8 in/min) grinding.
- Manual TIG: preparation + 2 passes at 10 cm/min (4 in/min).
- Keyhole plasma: 1 pass at 40 cm/min (15 in/min).
